- **Order:** The highest derivative present determines the order. For example:

- First-order differential equations involve only the first derivative.
- Second-order and higher involve derivatives of higher order.

- **Linearity:** Whether the equation is linear or nonlinear:

- Linear differential equations have the unknown function and its derivatives appearing linearly.
- Nonlinear equations involve powers, products, or other nonlinear functions of the unknown or its derivatives.

- **Homogeneity:** Homogeneous equations have zero on one side; nonhomogeneous include an

external forcing term.
